The presume sequence is a specializatly citalmen example on a peptide, the presume sequence is a special sequence of corresponding to the generic formula:

Al-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Where A1 = a basic amino acid; A5, A7 and A14 = a hydrophobic amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid;
A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid. This has a charge of at least +3 and its N-terminal acylated and/or C-terminal amidated or seterified forms, all of which may contain a disulphide bond to give a cystine bridge. This peptide is in snake form where all the cystine residues are replaced by a hydrophobic, small or large polar amino acid (e.g. alanine in this case). Peptides of this formula are designated protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and animals. The protegrins of growth of a virus or microbe and inactivate the endotoxin of gramnestance to microbial or viral infection in plants by preventing the treatment of sexually transmitted disease caused by microorganisms e.g. Candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
present sequence is a specifically claimed example of a peptide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Candida albicans; gram-negative bacteria; STD;

                                                                 The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula: A1-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A16-Cys-A16-A17-A18 b. A17-A18 and A1-a a basic amino acid; A5, A7 and A14 = a hydrophobic amino acid; A6, A7 and A14 = a hydrophobic amino acid; A7, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar, small amino acid; A10 and A11 = a basic, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; A10 and A18 may contain a disulphide bond to give a cleast 43 and its N-terminal acylated and/or C-terminal amidated or settified forms, all of which may contain a disulphide bond to give a cysteine residues are replaced by a hydrophobic, small or large polar amino acid (e.g. alanine in this case). Peptides of this formula are captured protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and annimals. The protegrins confer or esistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of the treatment of sexually transmitted disease caused by microorganisms e.g. candida ablicans, HIV-1. Chlamydia trachomatis, Treponema pallidum and Nasseria gonorrhoeae. The protegrins are more effective under contain contain contains contains are particularly useful for the protegrins are particularly useful for the protegrins are preservatine or for food. The protegrins are more effective under contains contains are particularly useful for the conditions and also be used in eye care solutions and asservation of a contain contains are particularly are more effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.

The present sequence is a specificative taxable or an experied formula:

Al-A2-33-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Where all a basic amino acid; A2 and A3 = a small amino acid; A4 = a basic amino acid; A5, An and A4 = a hydrophobic amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid;
A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic or small amino acid; A10 and A11 = a basic, substantial acid or experience and A11 = a basic, substantial amino acid; A10 and A11 = a basic, hydrophobic or small amino acid; A17 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; A10 and A18 may be absent or a basic, contextentified forms, all of which may contain a disulphide bond to give a cysteine bridge. This peptide is in snake form where all the cysteine bridge. This peptide is in snake form where all the cysteine bridge. This peptide is in snake form where all the canno acid (e.g. alanine in this case). Peptides of this formula are designated protegrins and are useful as anti-bacterial, anti-viral and antion acid (e.g. alanine in this case). Peptides of this formula are context resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gramrestative bacteria. The protegrins are particularly useful for the reatment of sexually transmitted disease caused by microorganisms eggentaner of sexually transmitted disease caused by microorganisms and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a specifically claimed example of a peptide,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     or esterification, and can be in linear or cystine-bridged form. D-Amino acid residues can be present.

The present sequence is a specifically claimed example of the protegrins, designated PG-1. It can be synthesised; or it can be isolated from porcine leukocytes, in which case it is in amidated and in dicystine bridged form. A synthetic version in which all the amino acids have D-configuration is also claimed.
                                                                                                                                                                                                                                                                                            New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 amino acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. profile) leukocytes; or analogues of these peptides in which 1-4 of the Cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

New peptides are disclosed which are designated "protegrins". The peptides are useful as antibacterial, antiviral and antifungal agents in both animals and plants. The peptides are 16-18 aminon acids in length and are characterised by four invariant Cys residues at positions 6, 8, 13 and 15 and either (1) by a characteristic pattern of basic and hydrophobic amino acids and/or (2) being isolatable from animal (e.g. proteine) leukocytes; or analogues of these peptides in which 1-4 of the Cys residues is/are replaced by hydrophobic or small amino acids. The peptides can be produced synthetically and some can be produced recombinantly or can be isolated and purified from their native sources. The peptides can be modified by Nacytation and/or C-terminal anidation acid residues can be present. Innear or cystine-bridged form. D-Amino acid residues can be present.

The present sequence is a specific example of the protegrin anloques in which Cys(6, 8, 13, 15) have all been replaced by Ser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antimicrobial protegrin; broad spectrum; gram-positive; bacterium; gram-negative; bacteria; yeast; fungus; fungi; protozoa; virus; retrovirus; HIV; human immunodeficiency virus; preservation; disinfection; prophylaxis; treatment; infection; disease; conjunctivitis; keratitis; corneal ulcer; stomach ulcer; STD; Helicobacter pylori; sexually transmitted disease; oral mucositis; gram-negative sepsis; endocarditis; pneumonia; blocidal; blostatic; respiratory infection; urinary tract infection; MRSA; protozoan; vancomycin resistant Enterococcus; pathogen; multi-drug resistance; penicillin resistant Streptococcus pneumoniae; pig; porcine; methicillin resistant (Staphylococcus aureus; systemic candidiasis.
                                                                                                                                           Antibiotic peptide-based cpds, designated protegrin(s) - are useful for treating and preventing viral and microbial infections and as preservatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score 69; DB 16; Length 10

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Protegrin 1 precursor - pig
N;Alternate names: neutrophil peptide 1
C;Species: Sus scrofa domestica (domestic pig)
C;Date: 19-Oct-1995 #sequence_revision 03-Nov-1995 #
C;Accession: S66284; S45712; S36820; S34585; S57607
R;Zhao, C.; Ganz, T.; Lehrer, R.I.
FEBS Lett. 368, 197-202, 1995
A;Title: The structure of porcine protegrin genes.

JQ1873
BRI protection - tomato mottle virus (isolate Florida)
C;Species: tomato mottle virus
C;Date: 17-Feb-1994 #sequence_revision 17-Feb-1994 #text_change 23-Jul-1999
C;Accession: JQ1873
R;Abouzid, A.M.; Polston, J.E.; Hiebert, E.
J. Gen. Virol. 73, 3225-3229, 1992
A;Title: The nucleotide sequence of tomato mottle virus, a new geminivirus isolated from A;Reference number: JQ1869; MUD: 93107858
A;Accession: JQ1873
A;Status: translation not shown
A;Molecule type: DNA
A;Residues: 1-257 <ABO>
A;Cross-references: GB:L14461; NID:g1200530; PIDN:AAC32418.1; PID:g295328
C;Genetics:
A;Map position: segment B
C;Superfamily: tomato golden mosaic virus BRI protein

A; Description: Arabidopsis thaliana chromosome II BAC T20K24 genomic sequence.
A; Reference number: 214167
A; Accession: T0053
A; Status: translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-1090 cROUJ
A; Roulsiey: DNA
A; Residues: 1-1090 cROUJ
A; Roulsiey: DNA
A; Residues: 1-1090 cROUJ

J. Biochem. 195:611-619(1991).
-!- FUNCTION: CUTTLEFISH SPERMICGENESIS IS CHARACTERIZED BY A DOUBLE NOCLEAR PROTEIN TRANSITION: HISTONES -> SPERMATID-SPECIFIC PROTEINS (TL/T2) -> PROTAMINES (SPL/SP2). THE PROTAMINES COMPACT SPERM DNA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.

"Molecular phylogeny and evolution of marsupial protamine Pl genes.";
Proc. R. Soc. Lond., B. Biol. Sci. 259:7-14(1995).
-!- FUNCTION: PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HAPLOID PHASE OF SPERMATOGENESIS. THEY COMPACT
SPERM DIA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
                                                                                                                                                                                                                                                                                                                                                                                                                     Retief J.D., Krajewski C., Westerman M., Winkfein R.J., Dixon G.H.;

-!- FUNCTION. PROTAMINES SUBSTITUTES FOR HISTONES IN THE CHROMATIN OF
SPERM DURING THE HAPLOID PHASE OF SPERMATOGENEIS. THEY COMPACT
SPERM DIA INTO A HIGHLY CONDENSED, STABLE AND INACTIVE COMPLEX.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
